Professional Summary

B.Tech Computer Science undergraduate (2027) with hands-on backend development experience building REST APIs (Node.js, TypeScript, MongoDB) and strong fundamentals in data structures, algorithms and object-oriented programming. Comfortable working in Agile/Scrum team environments, Git-based workflows, and leveraging AI coding agents to accelerate development. Seeking a Software Engineering internship to contribute to large-scale, customer-facing platforms.

Technical Skills

Languages: JavaScript, TypeScript, Java, Python, C

Core CS: Data Structures & Algorithms, Object-Oriented Programming, Agile/Scrum Methodologies

Frontend: HTML, CSS, JavaScript, React

Backend / APIs: Node.js, Express.js, REST APIs, Schema Validation (Zod, Mongoose)

Databases: MongoDB, SQL

Machine Learning: TensorFlow, Scikit-learn, NLP, Ensemble Learning, LLM, Embeddings

Tools: Git, GitHub, Linux, VS Code, AI Coding Agents

Experience

Software Development Intern

Jul 2026 – Present

Vicharanashala Lab for Education Design (VLED), IIT Ropar

- Designed and built REST APIs with Express.js, TypeScript and MongoDB using a layered (controller–service–repository) architecture for the Community Pinboard feature of a Crowd-Source FAQ platform.
- Implemented reminder, bookmark and important-link management modules with Zod schema validation, improving data integrity and reducing malformed requests.
- Collaborated with a cross-functional team in an Agile workflow, participating in code reviews, sprint discussions and iterative feature delivery.
- Debugged and resolved backend issues across the API layer, tightening error handling and edge-case coverage.
- Tech stack: TypeScript, Express.js, MongoDB, Mongoose, Zod, Git.

Projects

Sentinel-AI: Hybrid Intrusion Prevention System

Python, TensorFlow, Scikit-learn

- Built a hybrid intrusion detection system using the NSL-KDD dataset (125K+ samples).
- Developed a five-model ensemble achieving 92% accuracy and 98% precision.

TruthLens – AI Fake News Detection System

Python, Hugging Face, React

- Built an NLP classifier using TF-IDF and Logistic Regression with explainable AI summaries.

BDH Memory Visualization – AI Interpretability

Python, NetworkX, NumPy

- Modeled sparse, brain-inspired memory using graph-based neurons and Hebbian learning.

Education

B.Tech in Computer Science Engineering

Aug 2023 – May 2027

Manipal University Jaipur | CGPA: 8.84 / 10

- Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks.

Achievements

- Finalist – Synaptix Frontier AI Hackathon, Shaastra 2026 (IIT Madras).
- Campus Round Qualifier – HackWise 2026, IIM Indore.
